RADIATOR VALVE

5601

- Female angle radiator valve
- To be used with lockshield valve art. 5603
- Maximum nominal pressure 10 bar
- Temperature range min 0°C - max +95°C

Valve suitable for distributing, interrupting and regulating heat transfer fluids. Residential thermal systems are the ideal field of application. In the version with thermostatic head, the valve allows to set and automatically keep the room temperature. The seat tightness is guaranteed by a EPDM PEROX seal, particularly recommended with water-glycol solutions, with a maximum glycol presence of 50%.
