

THERMOSTATIC VALVE

RADIATOR VALVE

5606

- Male straight radiator valve with interchangeable connection for copper, plastic and multi-layer pipes
- To be used with lockshied valve art. 5608
- Maximum nominal pressure 10 bar
- Temperature range min 0°C - max +95°C

Valve suitable for distributing, interrupting and regulating heat transfer fluids. Residential thermal systems are the ideal field of application. In the version with thermostatic head, the valve allows to set and automatically keep the room temperature. The seat tightness is guaranteed by a EPDM PEROX seal, particularly recommended with water-glycol solutions, with a maximum glycol presence of 50%.
